

VENNO[®] OXYGEN

Special Animal Detergent

Cleaning and eliminating worm eggs.

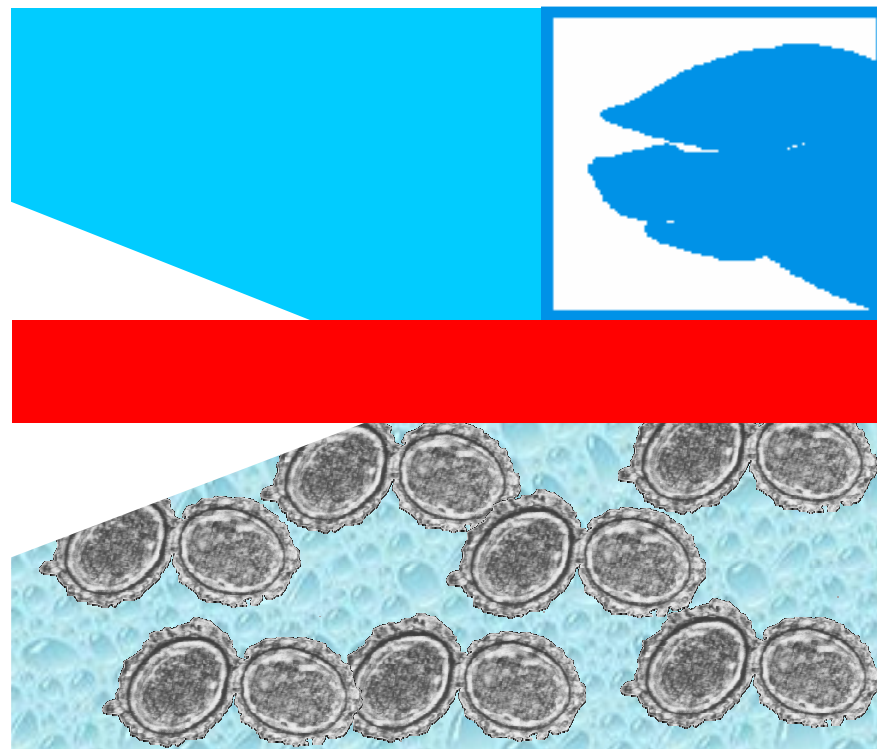

Killing the excreted roundworm eggs, a special characteristic of these eggs should be observed:

The egg membrane has a „glutinous“ surface. This is why the eggs are able to spread, they stick to the hair and skin.

VENNO[®] OXYGEN Special Animal Detergent, eliminates the roundworm egg glutinous behaviour within the shortest possible time. After applying VENNO[®] OXYGEN Special Animal Detergent, the eggs can be removed from the animal by simply rinsing them off. Afterwards, the roundworm eggs remaining on the floor of the animal house must be finally destroyed by disinfecting it with NEOPREDISAN[®] 135-1.

VENNO[®] OXYGEN Special Animal Detergent fills a gap between deworming and animal house disinfection by cleaning the sow thoroughly. It is a fact that only a systematic and integrated treatment can kill the pig roundworms effectively.

VENNO[®] OXYGEN Special Animal Detergent is recommended especially for cleaning sows before bringing them into the swine farrowing house.

VENNO[®] OXYGEN Special Animal Detergent

eliminates the roundworm egg glutinous behaviour within the shortest possible time.

Application:

2% solution

Application rate:

2 - 3 litres per animal,

leave the solution for about 5 minutes, afterwards rinse off with water.

Roundworm eggs

Ascaris suum (60 µm x 50 µm)
